

BUSINESS PROCESS MODELLING using BPMN

2

INTRODUCTION

Process modelling is a foundational skill required for the implementation of a complete Business Process Management capability. The methodology and notation used when documenting business processes are extremely important for standardisation. With a standard process modelling notation and methodology, process objects can be reused, models can be read and understood across business units and process modellers can work across modelling projects without restraint.

COURSE DESCRIPTION

Real IRM's Process Modelling Course teaches delegates foundational process modelling concepts as well as the importance and benefits of a well thought-out approach. The course covers the well-known process modelling standards and notations and includes a look at the considerations faced when embarking on a process modelling initiative.

Although the course does not teach delegates how to use a specific modelling tool, it does include exercises in MS Visio and a full day assessment to consolidate the learning.

COURSE DURATION

Four days

PREREQUISITES

Some experience with MS Visio.

WHO SHOULD ATTEND?

Those starting out as:

Process Modellers
Business Analysts
System Analysts
Business Architects
Solution Architects
Enterprise Architects
Information Architects

COURSE CONTENT

Introduction to modelling

Modelling Benefits
Planning your modelling approach
Meta-model concepts
