SPARX
SYSTEMS

The Enterprise Architect Cloud Services application provides a convenient mechanism for hosting models.

It provides easy access for your team members, and optionally to external customers and consultants anywhere around the world.

Cloud capability is included with Enterprise Architect and is free from hidden costs or any on-going service commitments.

Cloud based Business Architecture

Convenience and Cost Benefit

- Simple connection process
- Secure communication
- Reduced administration processes
- Convenience of collaboration tools
- Integrated into Enterprise Architect

Sharing a central repository, each user can be easily and exclusively connected with colleagues by using a simple string to connect rather than having to configure a database.

It is no longer necessary to expose the corporate network to share model data, as communication is facilitated over an encrypted and secure https connection.

The Reusable Asset Server allows the sharing and distribution of reusable model packages in an open and uniform manner and provides the ability to store supporting document artifacts in line with model packages.

Security, Governance and Protection

The CIO is assured that governance is fully supported. Auditing and user based security supports logging and tracking of all changes. This helps to ensure that Change Management is governed by best practice.

Rules and guidelines can never be lost or misplaced and are always visible via the model, which can be shared from anywhere in the world via Internet access.

Collaboration, Synchronizing and Accessibility

The Business Architect can be confident that everyone is on the same page. Regardless of location and time differences, all team members are securely connected to a shared model.

Stakeholder have the capacity to fully collaborate on projects and discuss project problems as they arise, right down to the per-element level.

User and role based privileges support collaboration, clarity and certainty by eliminating confusion and conflict.

Valued Added Services

Cloud capability is included with Enterprise Architect and is free from hidden costs or any on-going service commitments. The Reusable Asset Server facilitates software re-use and enables sharing and re-use of organization standards.

Every team member can access the Enterprise Architect Cloud Service Application from any EA compatible device at any time 24x7x365
